

TENANT STORAGE LOCKER MAINTENANCE

The Valiant lockers installed in your building have been manufactured and installed to be virtually free from maintenance. Valiant recommends the following to keep your lockers looking and operating like new.

1. **Clean the lockers** – Valiant recommends cleaning your lockers by vacuuming them first to release any built-up dust. Using a bucket of water mixed with a mild detergent, brush or sponge your lockers.
2. **Lubricate the hinges** – Every time after you clean your lockers, or on an annual basis, we recommend lubricating the hinges of your lockers with some type of lubricating spray applied sparingly to each hinge. You may use such products as WD-40®, lithium grease or a teflon spray. Wipe off any excess from the locker after completed.
